

# 6 REASONS NEUCOOL™ WINS

## 1

### SUPERIOR HEAT REMOVAL

Ability to handle higher heat fluxes, assuring protection for multiple future generations of processors

## 2

### LOWER OPERATING COST

Increased loop efficiency enables higher primary water loop temperatures and more free cooling.

## 3

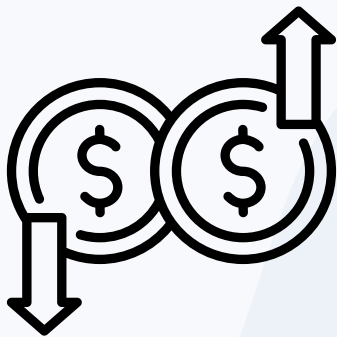

### NON- CONDUCTIVE FLUID

Non-conductive fluid ensures no GPU damage, even in the event of a leak.

## 4

### SEAMLESS SERVICEABILITY

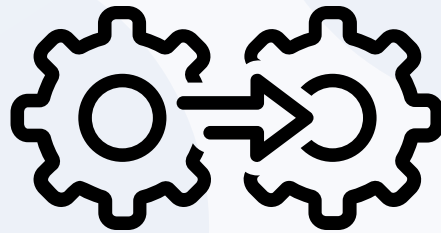

Superior redundancy and serviceability require little to no changes in existing servicing protocols.

## 5

### TCO ADVANTAGE

Outperforms 1-phase water and immersion technologies in cost efficiency.

## 6

### INFRASTRUCTURE COMPATABILITY

Connects to any data center chilled water primary loop, preserving investments in 1-phase water systems.
